

Failsafe & Failfast

Hashmap collision

Class loader

Types of class loader

Global exception handling spring boot

Spring IOC container

Solid Principles

Collection vs Collections

Example of functional interface (Runnable, Comparator)

Internal working of hashmap

Factory bean

Example of marker interface (serializable, cloneable, remote interface )

Bean scope

Proxy type bean scope

Lifecycle of spring

Generics

Reflection api can access private members of the class

Synchronised

Thread lock

Transient

Design patterns and Coding paradigm

Builder pattern

Actuator

Lock interface

Method reference

Execution class

Structural difference between hashmap and concurrent hashmap

Override spring autoconfiguration

Priority Queue

Autowire private class

Use of Serial version uid

Service Discovery

Flux

Cross site scripting

Find the number which starts with 1 using stream api and input can have negative numbers

Find the starting index of “sad” sub string in string “sadbutmoresad”
